

English version

In vitro diagnostic for the detection of anti-Leptospira antibodies in canine serum.

Precautions and warnings

- All wastes should be properly decontaminated prior to disposal.
- Do not mix components from kits with different serial numbers.
- Do not use a SNAP device that has been activated prior to the addition of sample.
- This test kit cannot differentiate between antibodies to pathogenic and nonpathogenic serovars of Leptospira.
- This test kit cannot differentiate between antibodies produced as a result of a natural infection with the organism and those produced by vaccination.
- Refer to country specific Material Safety Data Sheet for regional hazard identification.

Storage

- Store at 2–8°C until expiration date.
- All components must be at room temperature (18–25°C) before running the test.

Kit components

Item	Reagents	Quantity
1	1 bottle of Leptospira Antigen: HRPO Conjugate (Preserved with ProClin™ 150)	3.8 mL
2	SNAP Device	5 or 10
Reagents contained in each device		
Wash solution (preserved with ProClin™ 150)	0.4 mL	
Substrate solution	0.6 mL	
Other components:	transfer pipettes, sample tubes and reagent rack	

Conjugate - H317/H412/P261/P260/P262+P352/P333+P313:
May cause an allergic skin reaction. Harmful to aquatic life with long lasting effects. Avoid breathing mist/vapors. Wear eye protection/face protection. Wear protective gloves. If IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical advice/attention. If skin irritation or rash occurs: Get medical advice/attention.

Wash Solution - H317/H412/P261/P260/P262+P352/P333+P313/H402/H412/P261/P260/P262+P352/P333+P313/H402/H412/P261/P260/P262+P352/P333+P313:
May cause an allergic skin reaction. Causes serious eye irritation. Harmful to aquatic life with long lasting effects. Avoid breathing mist/vapors. Wear eye protection/face protection. Wear protective gloves. If IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical advice/attention. If skin irritation or rash occurs: Get medical advice/attention.

Sample information

- Samples must be at room temperature 18–25°C before beginning the test procedure.
- Serum, either fresh or stored at 2–8°C for up to one week, can be used.
- For longer storage, serum can be frozen (-20°C or colder) and then centrifuged before use.
- Hemolyzed or lipemic samples will not affect test results.

Test procedure

- Allow all components to equilibrate at room temperature 18–25°C for 30 minutes before use. **Do not heat.**

The sample will flow across the result window, reaching the activation circle in 30–60 seconds. Some sample may remain in the sample well.

Note: The positive control may develop sooner, but results are not complete until 10 minutes.

Interpreting the test results

Positive result

Any color development in the sample spots indicates the presence of anti-Leptospira antibody in the sample.

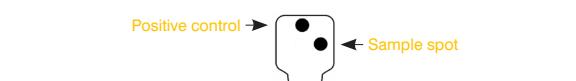

Invalid results

Background — If the sample is allowed to flow past the activation circle, background may result. Some background color is normal. However, if colored background obscures test result, repeat the test.

No color development — If the positive control does not develop color, repeat the test.

Performance summary by MAT Titer

*Numbers shown represent total MAT positive samples per titer.
